

A potential test question

A W18x55 steel beam supports a uniform load with an overhanging end. Determine:

- a) The maximum bending stress if $w = 2$ kip/ft;
- b) The allowable uniform load w if the allowable bending stress is 15.8 ksi.

Aug 25-5:23 PM

The table contains technical data for steel beams, including dimensions like depth, flange width, and web thickness, as well as material properties like yield strength and modulus of elasticity. It is organized into columns and rows for different beam specifications.
